Instruction: Register range for various types of inverter

TL-X/TL-XH/TL-XH US (MIN Type): 03 register range: 0~124,3000~3124, 3125~3249 (TL-XHUS); 04 register range: 3000~3124,3125~3249, 3250~3374 (TL-XH)

TL3-X(MAX, MID, MAC Type): 03 register range: 0~124, 125~249; 04 register range: 0~124, 125~249

MAX 1500V, MAX-X LV: 03 register range: 0~124, 125~249; 04 register range: 0~124, 125~249, 875~999

MOD TL3-XH: 03 register range: 0~124, 3000~3124; 04 register range: 3000~3124, 3125~3249

Storage (MIX Type): 03 register range: 0~124, 1000~1124; 04 register range: 0~124, 1000~1124

Storage (SPA Type): 03 register range: 0~124, 1000~1124; 04 register range: 1000~1124, 2000~2124, 1125~1249

Storage (SPH Type): 03 register range: 0~124, 1000~1124; 04 register range: 0~124, 1000~1124, 1125~1249

catalog

1 Data format	5
2 Command Format	5
3 Device Message Transmission Mode / Framing	8
4 Register map	0
4.1 Holding Reg	9
4.2 Input Reg	47
5 Set address	84
6 Notice	84

1 Data format

Address	Function	Data	CRC check
8 bits	8 bits	N×8bits	16bits

Valid slave device addresses are in the range of 0 - 254 decimal.

The individual slave devices are assigned addresses in the range of 1 – 254.

0 is the broadcast address

It is 16bits (two bytes) unsigned integer for each holding and input register;

2 Command Format

Function 3 Read holding register

QUERY		
Field Name	Example (Hex)	
Slave Address	11	
Function	03	
Starting Address Hi	00	
Starting Address Lo	6B	
No. of Points Hi	00	
No. of Points Lo	03	
Error Check (LRC or CRC)		

RESPONSE		
Field Name	Example (Hex)	
Slave Address	11	
Function	03	
Byte Count	06	
Data Hi (Register 40108)	02	
Data Lo (Register 40108)	2B	
Data Hi (Register 40109)	00	
Data Lo (Register 40109)	00	
Data Hi (Register 40110)	00	
Data Lo (Register 40110)	64	
Error Check (LRC or CRC)		

Response Error:

11 0x80 | 0x03 ErrornumCRC(Errornum as a byte)

Function 4 Read input register

QUERY		
	Example	
Field Name	(Hex)	
Slave Address	11	
Function	04	
Starting Address Hi	00	
Starting Address Lo	08	
No. of Points Hi	00	
No. of Points Lo	01	
Error Check (LRC or CRC)		

RESPONSE		
Field Name	Example (Hex)	
Slave Address	11	
Function	04	
Byte Count	02	
Data Hi (Register 30009)	00	
Data Lo (Register 30009)	OA	
Error Check (LRC or CRC)		

Response Error:

11 0x80 | 0x04 ErrornumCRC (Errornum as a byte)

Function 6 Preset single register

QUERY		
Field Name	Example (Hex)	
Slave Address	11	
Function	06	
Register Address Hi	00	
Register Address Lo	01	
Preset Data Hi	00	
Preset Data Lo	03	
Error Check (LRC or CRC)	222	

RESPONSE		
Field Name	Example (Hex)	
Slave Address	11	
Function	06	
Register Address Hi	00	
Register Address Lo	01	
Preset Data Hi	00	
Preset Data Lo	03	
Error Check (LRC or CRC)	<u> </u>	

Response Error:

11 0x80 | 0x06 ErrornumCRC (Errornum as a byte)

Function 16 Preset multiple register

QUERY		
	Example	
Field Name	(Hex)	
Slave Address	11	
Function	10	
Starting Address Hi	00	
Starting Address Lo	01	
No. of Registers Hi	00	
No. of Registers Lo	02	
Byte Count	04	
Data Hi	00	
Data Lo	0A	
Data Hi	01	
Data Lo	02	
Error Check (LRC or CRC)	· —	

RESPONSE		
Field Name	Example (Hex)	
Slave Address	11	
Function	10	
Starting Address Hi	00	
Starting Address Lo	01	
No. of Registers Hi	00	
No. of Registers Lo	02	
Error Check (LRC or CRC)		

Response Error:

11 0x80 | 0x10 ErrornumCRC (Errornum as a byte)

3 Device Message Transmission Mode / Framing

RTU Mode

When controllers are setup to communicate on a Modbus network using RTU (Remote Terminal Unit) mode, each 8-bit byte in a message contains two 4-bit hexadecimal characters. Each message must be transmitted in a continuous stream.

The format for each byte in RTU mode is:

Coding System: 8-bit binary, hexadecimal 0-9, A-F Two hexadecimal characters contained in each 8-bit field of the message

Bits per Byte:

1 start bit

8 data bits, least significant bit sent first

None parity 1 stop bit

Error Check Field: Cyclical Redundancy Check (CRC)

The baud rate of the transmission is:

Default Baud Rate: 9600 bps

Can be set through hold register 22

Minimum CMD period (RS485 Time out): 850ms.

Wait for minimum850ms to send a new CMD after last CMD. Suggestion is 1s;

Maximum Data Length Define:

Maximum read data length is **125 words** in read command; Maximum update data length is **125** words in preset command;

Note:

Except the CEIO-21 and VDE-AR-N 4105 power management registers, you should refer the manufactory's suggestion when writing other registers;

4 Register map

It is 16bits (two bytes) unsigned integer for each holding and input register;

4.1 Holding Reg

Registe	Variable	Description	Write	Value	Unit	Initial	Note
r NO.	Name		or not			value	
First gro	oup		•		•	•

BDC and	d BMS information	(support up to 10 PARALLEL BDCS)		
4000-	1	The first 8 registers are the 16-bit serial number of BDC, then 69 re	egisters have the	
4107		same data area as 3165-3233, the remaining 31 registers are res	erved, a total of	
		108 registers (including 8 registers occupied by serial number).		
4108-	2	The first 8 registers are the 16-bit serial number of BDC, then 69 re	egisters have the	
4215		same data area as 3165-3233, the remaining 31 registers are res	erved, a total of	
		108 registers (including 8 registers occupied by serial number).		
		The first 8 registers are the 16-bit serial number of BDC, then 69 re	egisters have the	
		same data area as 3165-3233, the remaining 31 registers are res	erved, a total of	
		108 registers (including 8 registers occupied by serial number).		
4864-	9	The first 8 registers are the 16-bit serial number of BDC, then 69 re	egisters have the	
4971		same data area as 3165-3233, the remaining 31 registers are res	erved, a total of	
		108 registers (including 8 registers occupied by serial number).		
4972-	10	The first 8 registers are the 16-bit serial number of BDC, then 69 registers have the		
5079		same data area as 3165-3233, the remaining 31 registers are res	erved, a total of	
		108 registers (including 8 registers occupied by serial number).		

5 Set address

Knock the pv inverter to let the lcd display to the "COM Addr: xxx", then double knock, if displays "Move", you should another double knock, until it displays a address number, then you can give a single knock to change the address, this address will be remembered when the lcd backlight off.

6 Notice

- 1) It can drive mostly 32 pv inverters for one rs485 comport.
- 2) There are only read input and hold registers commands even the newest version.

- 3) App user could only care the input register.
- 4) App user could not care the holding registers.
- 5) Except the CEIO-21 and VDE-AR-N 4105 power management registers, you should refer the manufactory's suggestion when writing the other registers;
